Un proyecto de indudable interés. Parte de entender la arquitectura como la construcción de una membrana que aísla el interior del exterior. Es una coraza de protección, una tienda de campaña, todo se resuelve dentro de esa cáscara. Es un fósil con una actividad orgánica en su interior. La membrana no es la consecuencia de aplicar un sistema constructivo tradicional, está moldeada para dar sentido a la disposición de los elementos que protegen, gradas, trampolín, pileta de saltos,... su sección no es simétrica atendiendo a las consideraciones de iluminación natural, visión del espacio destinado a la composición etc.... El testero abierto a la piscina exterior queda por resolver para darle un final al edificio, sin límite longitudinal aparente.

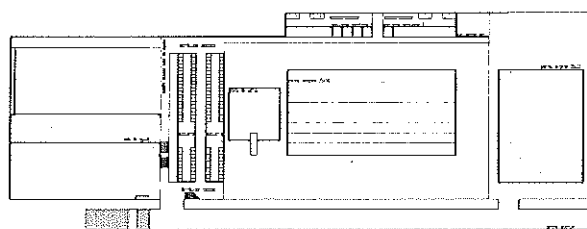

This is a very interesting proposal that is based on the conception of architecture as a membrane that marks the difference between interior and exterior space. The building is conceived as a protective shield or a tent and all of the functions are fulfilled within. It is like a fossil with organic activity inside. The membrane is not dependent on traditional building method and instead arises from and gives meaning to the arrangement of the necessary protective elements: bleachers, trampoline, diving pool... the building section is not symmetrical in order to provide natural sunlight inside and a clear view of the composition, etc. The open end of the outdoor swimming pool area has yet to be resolved for the design to be truly completed, since the building lacks an apparent end facade.
