La idea que desde un principio me atraía era la de "domesticar" la pendiente con el propio programa para conseguir el espacio público, ese espacio habitable que se pretendía para uso y disfrute de los habitantes del poblado, con los mínimos elementos posibles. Un muro superior y otro inferior nos permiten conseguir una superficie horizontal en la ladera. El "muro" superior albergará los espacios comunes, el inferior será el garaje del edificio de viviendas. He agrupado todo el programa de viviendas en un único bloque que resguarde el espacio público del viento dominante del N-O.

The idea that attracted me from the beginning was to "domesticate" the gradient with the program itself and provide public spaces, as habitable spaces for the use and enjoyment of the people of the settlement with as few elements as possible. Upper and lower walls yield a horizontal platform. The upper "wall" contains the communal spaces, while the lower one is the garage for the housing building. All of the dwellings are located in a single building that shelters the public square from northeastern winds.
